

UW ECE STUDENT SPOTLIGHT

W

JENNY CHO, B.S.

Jenny Cho

B.S. Electrical Engineering, 2020

Seoul, South Korea - Bellevue, WA, USA

Jenny found herself looking to the UW for its accessibility to a plethora of opportunities. She sought the ECE major after an elective course in MATH 126, a prerequisite for engineering, originally looking into mechanical and civil engineering. Her ECE specializations are in Wireless Communications and Embedded Systems, as she hopes to be doing work that, "... serves underprivileged and marginalized communities around the world. My values rest in empowering people, which I found ECE can relate to, and I am happy that I have the opportunity to make an impact." Jenny says her connection with Dr. Rania Hussein, which blossomed from her outgoing personality, has helped her engage within the ECE community and go beyond the classroom. Jenny encourages her peers to be comfortable with reaching out to T.A.s and other graduate students to ask for help. Through this, she sees herself representing the form of fervent, female participation within the department.

Jenny is committed to starting the moniker for ECE students, 'EleCE (el-LEK-ee)'. She will be applying to the B.S. and M.S. combined program in pursuit of her interests for research opportunities. As well, Jenny joined the UW Sailing Club, and will be learning how to sail over the summer.
