At UW ECE, we cultivate innovation and inspire through high-impact research. We educate and develop tomorrow’s leaders to help solve the world’s most pressing challenges.

Our position as a top-ranked electrical and computer engineering department provides our faculty and student body a vibrant learning culture. Students receive a robust education through a strong technical foundation, group project work and hands-on research opportunities. Our faculty work in dynamic research areas collaborating with academia, industry and government institutions.

UW ECE continues to lead in cutting-edge science and technology while advancing socially-responsible innovation. Our innovation ecosystem is critical in promoting an entrepreneurial mindset in our teaching, and is strengthened through diverse partnerships that address complex global challenges in health, energy, technology and the environment.

**DIVERSITY**

UW ECE exceeds the national average of women in the field for undergraduate and graduate degrees awarded and the number of women in tenured and tenure-track faculty positions. We continue to work to improve diversity, equity and inclusion to build a community that is welcoming, supportive and a safe place for all to learn and grow.

TOP-TIER EDUCATION

UNDERGRADUATE EDUCATION

Bachelor of Science in Electrical Engineering (BSEE) degree prepares students for the workforce with a strong grounding in fundamentals and opportunities for internships, leadership roles, and hands-on research with renowned faculty in one of 40 department labs.

The five-year combined B.S.-M.S. program provides ambitious undergraduates with a seamless transition to graduate studies following completion of their bachelor’s degree.

STUDENT INNOVATION

The ENGineering INnovation and Entrepreneurship (ENGINE) capstone program helps undergraduate students build and strengthen their entrepreneurial and networking skills. Students are mentored by faculty and industry sponsors while learning about innovation readiness, startups and new ventures through exciting year-long, industry-sponsored projects.

PROJECT-BASED LEARNING: AIRCRAFT SOFTWARE CONFIGURATION TOOL

An ENGINE team partnered with Alaska Airlines on a web portal to efficiently load computer software onto airplanes. The tool will be implemented across Alaska Airlines’ entire fleet.

GRADUATE EDUCATION

UW ECE graduate education prepares students to address pressing challenges in healthcare, energy, the environment, communication and more. Students receive unique opportunities to interact with technology companies and a vibrant startup community.

The Professional Master’s Program (PMP) offers an exciting industry-focused evening curriculum for recent graduates and working professionals. Students explore cutting-edge technical topics and university research, giving students the expertise needed to drive innovation.

The Juris Doctorate and Master of Science in Electrical Engineering (JD/MSEE) program, a concurrent PMP/JD degree, provides comprehensive education to students interested in patent law. This unique degree exposes students to the latest technologies in UW ECE while also providing them with a valuable JD credential.

Our graduates find employment at top companies in the region, including: Amazon • Apple • Boeing • Facebook • Google • Intel • Microsoft • T-Mobile

OUR STUDENTS

524 Undergraduate students
242 Bachelor’s degrees awarded
454 Graduate students
49 Master’s degrees awarded
46 Professional Master’s Program (PMP) degrees awarded
31 Ph.D. degrees awarded

* data from Autumn 2020

UW ECE INNOVATION

With more spinouts than any other department at the UW, UW ECE faculty and students have founded or been in leadership roles at more than 50 startup companies, including:

A-Alpha Bio – Accelerating drug development with synthetic biology and next-generation sequencing
Jeeva Wireless – Reimagining connectivity with low-power backscatter technology
MicrobiomX – Providing rapid, personalized restorative gut therapy through microbiota transplants
Olis Robotics – Making robots smarter through progressive autonomy
OneRadio – Changing the way we access the radio-frequency spectrum
Parse Biosciences – Providing scalable single cell RNA-sequencing solutions
Proprio – Using computer vision and machine learning to enhance human and computer performance
Tunoptix, Inc. – Tunable metasurface optics for machine vision and AR/VR applications
ThruWave – Providing state-of-the-art millimeter-wave (mmW) 3D imaging
WiBotic – Providing wireless power solutions for robotics
Our department’s reputation is based on the quality of our faculty and their contributions to education, research and leadership. UW ECE faculty are frequently honored nationally and internationally for excellence. Attracting, retaining, and rewarding faculty remains one of our highest priorities.

**CENTERS AND LABS**

UW ECE faculty lead or participate in interdisciplinary research centers across campus, and direct laboratories at the cutting-edge of the field.

- AMP Lab – Amplifying Movement and Performance
- The UW Biofabrication Center (BIOFAB)
- Clean Energy Institute (CEI)
- Center for Neurotechnology (CNT)
- UW ECE Center on Satellite Multimedia and Connected Vehicles (CMMB Vision)
- eScience Institute
- Institute for Nano-Engineered Systems (NanoES)
- Molecular Engineering and Sciences Institute (MoIES)
- Northwest Quantum Nexus (NQN)
- QuantumX Initiative
- U.S. Dept. of Energy PNW National Lab (PNNL)
- Washington Nanofabrication Facility (WNF)
TRAILBLAZERS

UW ECE trailblazers are honored for the work they do to effect positive change in the world. Our academic pioneers’ far-reaching research has created important foundations for other electrical and computer engineering scholars to build upon, while our industry leaders’ ground-breaking enterprises have provided important solutions that improve lives.

Elaine Chang (BSEE ’93) has served in various leadership positions at Amazon China, including leading the launch of Amazon Prime in China. Now managing director for AWS Greater China, she is responsible for business strategies, and industry and government partnerships.

Keith Rattie (BSEE ’76) has a 40-year-career in the oil and gas industry, serving as CEO of Questar Corp. and general manager of Chevron’s international gas unit. He has helped shape utility, power and energy legislation representing industry at congressional hearings.

John MacLeod (BSEE ’64) designed NASA’s Apollo ground communications network, headed Skylab’s solar telescope operations and held a technical management role for the Space Shuttle communications and data systems. He later founded two companies that introduced nationwide and international text messaging.

Gabriela A. Gonzalez (BSEE ’92) is the deputy director of the Intel Foundation, focused on K-12 STEM education for underserved communities. As a program manager at Intel Labs, she steered program and curriculum development at research universities around the world.

Alanson Sample (Ph.D. ‘11) led The Walt Disney Company’s work in robotics and artificial intelligence. As an associate professor at the University of Michigan, he applies novel approaches to electromagnetics, RF and analog circuits, and embedded systems.

Yael Hanein (Postdoc) is an associate professor and VP of NanoRetina, a startup company developing artificial vision. Yael designs electronic nanodevices that interface with the brain, novel materials for artificial retina applications, and skin electronics for electrophysiology.

Pamela Bhatti (MSEE ’93) is an associate professor and associate chair at Georgia Tech. She researches hearing loss through focused neural stimulation and novel implantable sensors, as well as cardiac imaging to assess and monitor cardiovascular disease.

Alhussein Abouzeid (MSEE ’99, Ph.D. ’01) is the founding director of WiFiUS, an international NSF-funded virtual institute on wireless systems research. He builds dynamic wireless networks with applications in environmental sensing and disaster response.

“Electrical and computer engineering technology has become ubiquitous, defining how we work, how we live, and even what it means to be human. UW ECE means more than just exploring amazing new technologies; it means shaping the future of humanity.”

UW ECE Professor and Chair Eric Klavins
